

Raytheon's Business Continuity Solutions Dependable. Secure.

Customer Benefits

- Mitigate risks by improving security and resilience in infrastructure
- Tailored, flexible solutions that are focused to meet your agency's preparedness needs today and in the future
- Compliance with government requirements for infrastructure protection and business continuity
- Leverage Raytheon's technical and domain expertise, as well as commercial best practices through partners like Sun Microsystems
- Explore, integrate and test solutions prior to enterprise-wide rollout through the *Raytheon Integration Center (RIC)*

In today's global information age, business continuity takes on a higher level of complexity and urgency than ever before.

Natural disasters, security intrusions and acts of terrorism can cripple operations—limiting an agency's ability to deliver critical services to citizens and organizations around the country. Policies are being enforced by the government to ensure preparedness. Is your agency ready to comply with new regulations? Can you quickly recover from a catastrophic event?

Raytheon's complete and secure business continuity solutions ensure disaster recovery and continuity of operations for federal agencies. Our solutions make sure you are prepared prior, during and after an emergency: *Operational Resilience* involves creating a secure and adaptable infrastructure, as well as enforcing preventative measures to

minimize risk; *Disaster Recovery* includes information recovery and restoration in the aftermath; and *Data Continuity* entails an ongoing solid plan to maintain preparedness through reliable networks and backup capabilities.

Secure and Reliable

Agencies increasingly rely upon sophisticated IT systems to conduct operations, and information security is an underlying requirement. Raytheon brings domain expertise and world-class security engineering to ensure information is reliable, accurate and available when needed.

Mission-Tailored

One size, one technology does not fit all needs. As your agency's role, structure, infrastructure and business processes change, so should your business continuity plan.

Raytheon's disaster recovery and continuity of operations offering addresses agency's unique and ever changing business needs.

Raytheon helped NASA's Langley Research Center prepare for and then recover from Hurricane Isabel, one of the most damaging hurricanes ever to hit Virginia's Hampton Roads area. NASA noted about working with the Raytheon program team, "Their efforts insured that critical services to the Center, in particular the network system, were not damaged and remained operational throughout the hurricane and resulting power outage."
