ST. PETERSBURG, Fla., (April 15, 2008) – While we can not comment on pending litigation, we are continuing our efforts to complete our current environmental assessment by the end of May and review our remediation plan with the Florida Department of Environmental Protection later this year. With FDEP's final approval, our goal is to have the remediation underway in 2009. We are also continuing our communication activities with community leaders, residents in the vicinity of our facility and elected officials. Raytheon is completely committed to insuring that the environmental issues are fully addressed.
