Raytheon Launches Traveling Interoperability Demo

When lives are at stake, seamless communication is essential. With Raytheon's new mobile Civil Communications demonstration, first responders can see first-hand how cutting edge communications capabilities can help when crises strike.

Experience Hands-On, High-Tech Systems Integration

Raytheon's mobile demo fully immerses public safety professionals in rescue scenarios, showcasing the benefits of open architecture solutions and interoperable communications. Such capabilities allow users on different legacy networks to converse locally, regionally or even nationally.

First responders attending the Raytheon demo are encouraged to bring their own radios to see for themselves how their equipment can communicate with any radio on another system or frequency.

Battle Tested Systems Arrive on City Streets

For more than 40 years, Raytheon has provided interoperable voice, video and data communications solutions systems to soldiers on the battlefield – without existing infrastructure.

"We have now taken proven technology and applied it in a public safety environment, virtually eliminating barriers to communication when it matters most," said Jerry Powlen, Raytheon Network Centric Systems vice president of Integrated Communications Systems.

Raytheon Drives Interoperable Communications to Your Community

The mobile Civil Communications demo begins in Los Angeles before touring local and state first responder agencies across the country. The self-contained mobile unit houses all necessary equipment for a variety of live, interactive demos using Raytheon's array of Civil Communications capabilities.

"Incompatible radios can hinder basic communication. The technology exists to solve that problem, so we want to visit our public safety professionals and let them see for themselves how a truly interoperable communications system can help make them safer," said Mike Bostic, a Raytheon NCS director of Civil Communications and 34-year veteran of the Los Angeles Police Department.

Raytheon
Customer Success Is Our Mission

Raytheon's long history in military communications, and our expertise as a systems integrator, make us uniquely positioned to provide solutions that are focused not on specific equipment, but on first responder and public safety needs. Our open-standards approach is just one example of our customer-first philosophy. Today, in communities across the country, we are helping first responders to do their jobs better, more efficiently and with a greater degree of safety. Reliable interoperable communications solutions backed by decades of experience.
