

Idaho P25net Award Fact Sheet

Raytheon to provide an APCO P25 radio system for Idaho first responders. The company is partnering with Teton Communications Inc. to deliver the wide area communications solution.

Idaho P25net Solution

Raytheon will provide an APCO Project 25 (P25) radio system for public safety agencies throughout eastern Idaho to enable seamless interoperable communications. The company will be a subcontractor on the multi-million dollar contract awarded to Teton Communications Inc.

P25net is an advanced internet protocol (IP) networked radio system that is fully compatible with all P25 radios and the industry standard inter-sub-system interface to other manufacturer's radio systems.

Raytheon will deliver a 14-site P25net digital trunked radio communications solution and provide system integration services including equipment configuration and 24-hour technical support. The system includes additional components from Tait Radio Communications.

"This deployment represents the core philosophy of interoperability," said Jerry Powlen, vice president of Integrated Communications Systems, Raytheon.

"First responders spanning a five-county area have joined to implement a standardized wide area interoperable communica-

tions solution to achieve efficient joint command and control throughout their region."

"Taking advantage of a standards-based IP platform and a distributed architecture, Raytheon's P25net provides first responders with an affordable P25 radio system," said Tony Hafla, president, Teton Communications, Inc.
