

A More Effective Information Protection Solution to Mitigate Insider Threats

“DoD agrees with the DNI that responsible information sharing must include mechanisms to safeguard intelligence while protecting valuable sources and methods ...

As an element of the DoD Insider Threat Program, USD(I) has been developing comprehensive policy for a DoD CI Insider Threat Program to detect, identify, assess, exploit and deny insider threats that have a foreign nexus, and that may lead to espionage and support to international terrorism.”

-- Teresa Takai,
Chief Information Officer
and Acting Assistant
Secretary of Defense for
Networks and
Information Integration

An organization’s intellectual property—its discoveries, inventions, trade secrets— is its lifeblood. Cyber threats designed to steal intellectual property find their way into organizations through many vectors, but at the root of all threats is human behavior. To protect digital assets, organizations must audit human behavior. Raytheon SureView™, an appliance-based solution, audits and enforces policies across all endpoints and channels of communication.

SureView integration with McAfee® ePolicy Orchestrator® (McAfee ePO™) enables Department of Defense components to deploy and seamlessly manage command and control of SureView clients across the enterprise through their existing Host Based Security System (HBSS) infrastructure. The integration accelerates effective responses to critical security events on the endpoints, provides faster implementation time and efficient management of an effective cyber audit program.

The Visibility and Context You Need To Protect Against Insider Threats

A wide range of insider threats can jeopardize your organization. Accidental data leaks are only one dimension; threats come in all shapes and sizes – from well-intentioned but inappropriate policy violations to deliberate theft of intellectual property or sensitive information.

Finding them feels like finding a needle in a haystack. Where do you start? You need an information protection solution that audits all activity without disrupting mission-critical business processes and easily distinguishes between malicious and benign behavior. SureView provides you with the context, evidence and answers that you need, even for mobile laptops not connected to the network. SureView is the only solution that provides visibility to policy violations on encrypted content in email text and attachments as well content offloaded to removable media such as thumb drives.

Trusted Mission Partner

Raytheon Oakley Systems has been a trusted mission partner of federal and commercial customers for a decade and is the industry leader in insider threat detection. SureView is developed by a team of insider threat experts and has been refined by a decade of real-world operations on our customers’ networks.

The Cyber Audit Solution

Raytheon SureView enables safe and effective use of mission-critical technologies by capturing human behaviors that serve as warning signs leading up to a breach. SureView replays the event in a DVR-like format, providing irrefutable and unambiguous attribution of end-user activity.

About McAfee Compatibility

Integration with McAfee ePolicy Orchestrator (ePO) enables analysts to deploy and monitor the health and status of Raytheon SureView clients, perform version upgrades and remove clients. Customers will benefit from increased protection, visibility and automation; reduced response times; and lower overall management costs.

McAfee Compatible

Provides HBSS (ePO) operator Command and Control over SureView clients

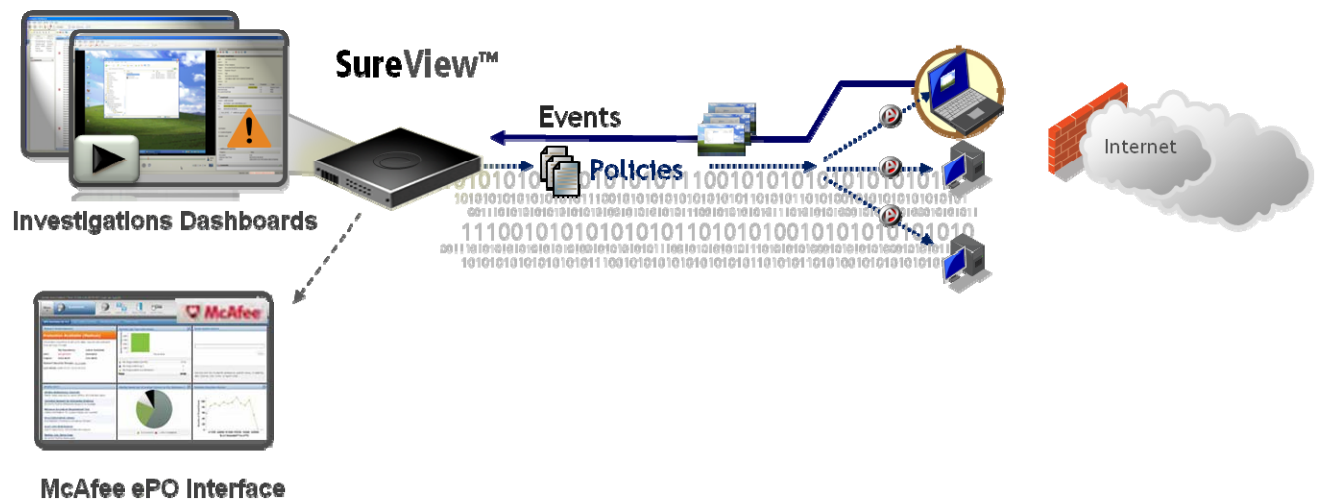

- Start
- Stop
- Install
- Uninstall

Provides HBSS (ePO) operator Health and Status information for SureView clients

- State
- Communications
- Policy load

About McAfee ePolicy Orchestrator (ePO) Software

McAfee ePO software is the industry-leading security and compliance management platform. With its single agent and single-console architecture, ePO software provides intelligent protection that is automated and actionable, enabling organizations to reduce costs and improve threat protection and compliance.
