

Standard Missile-3

A new Missile Defense capability has emerged.

Raytheon's Standard Missile 3 (SM-3) brings a new capability to counter the global ballistic missile threat. SM-3 has an impressive resume: sea-based, mobile, high velocity, hit-to-kill accuracy against short- to medium-range ballistic missiles, all backed by a successful flight test program. Today SM-3 is being deployed on U.S. Navy cruisers and destroyers, but its true potential is global. Japan has already made the decision to acquire SM-3 for the defense of its homeland, but many nations with vertical launch systems could employ this powerful defensive weapon. Ballistic Missile Defense – coming soon to a theater near you.
