

INTEGRATED DEFENSE SYSTEMS

Dan Smith, *President*

Integrated Defense Systems (IDS), with 2005 sales of \$3.8 billion, is Raytheon's leader in joint battlespace integration.

IDS is at the forefront of Radio Frequency technology, producing the radar portion of the Missile Defense Agency's (MDA) Sea-Based X-Band Radar as part of an industry team. The business also supplied the Forward-Based X-Band Transportable Radar to the MDA and was chosen by the U.S. Air Force to produce an integrated early warning radar for Taiwan.

The U.S. Navy selected IDS, a leader in systems integration, as the prime mission systems integrator for the next-generation DD(X) destroyer, and the Cobra Judy Replacement (CJR) and CVN-21 aircraft carrier programs, using Dual Band Radar systems for both DD(X) and CJR.

By employing the most advanced technology, IDS provides solutions for domestic and international customers throughout the battlespace.
