

INTELLIGENCE AND INFORMATION SYSTEMS

Mike Keebaugh, *President*

Intelligence and Information Systems (IIS), with 2005 sales of \$2.5 billion, exceeded an annual average award fee of 96 percent for the third consecutive year, indicating a high degree of satisfaction on the part of our customers.

The business leverages its Command, Control, Communications, Computers and Intelligence (C4I) technologies, and its knowledge of intelligence and information systems, to help customers transform data into actionable intelligence for a better, safer world.

IIS is leading the U.S. Air Force Distributed Common Ground System (DCGS) 10.2 program to modernize its distributed intelligence, surveillance and reconnaissance systems, creating a worldwide, network-centric enterprise for real-time information sharing.

This cornerstone system is leading the way toward seamless interoperability among all military services with the open architecture, Web-based DCGS Integration Backbone (DIB). The DIB will facilitate the distribution of the right information at the right time to maximize operational effectiveness.
