Web-Based Training Development
Raytheon Professional Services

Benefits

- Significantly reduces the industry's typical WBT development cycle-time

- Facilitates collaboration throughout the development process between Raytheon development teams, client reviewers and Subject Matter Experts (SMEs)

- Facilitates the rapid authoring and reuse of content and assets

- Reduces the time associated with translation, localization and maintenance of multilingual content

- Produces SCORM 1.2 or 2004 conformant and ADA Section 508 compliant WBT courses

- Publishes the industry's only true multilingual package that allows for "on-the-fly" language changes

Raytheon Professional Services (RPS) is a global leader in a wide variety of course development methods, including Web-Based Training (WBT). We develop thousands of finished hours of WBT courses every year, many of which are translated into 28 languages for more than 1 million learners in over 80 countries.

This high volume requires industry-unique tools and processes that facilitate rapid course development, consistent high quality and workflow-enabled collaboration. Our proven development process ensures that your training outcomes align with your business objectives and successfully optimize the performance of your workforce.

Our Catapult Rapid Learning Content Management System™ (LCMS) platform enables us to collaboratively produce your WBT courses better, faster and at lower cost. So you can count on more value for your training dollars and bottom-line results for your business.

Raytheon

What if investments in Instructor-Led Training (ILT) content could be extended?

Catapult Rapid LCMS

Our unique Catapult Rapid LCMS platform streamlines WBT development and deployment, and facilitates a collaborative environment in which we work closely with our clients and their SMEs. It enables us to rapidly and cost-effectively storyboard, develop, collaborate, manage and deliver WBT content.

Storyboard

Catapult Rapid LCMS is the only industry tool that includes an integrated storyboard. This fosters collaboration and eliminates the redundant moving of elements from Word or PowerPoint into the LCMS platform. We can then streamline storyboard cycle-time and accelerate the course build.

Develop

Catapult Rapid LCMS integrates the entire development and deployment process into one tool, reducing development cycle-time by over 20% and lowering the cost of WBT. In addition, Catapult's extensive library of preprogrammed interactions enables us to produce WBT with higher levels of interactivity without increasing production effort levels.

Collaborate

The Catapult Rapid LCMS platform facilitates collaboration and streamlines review and revision cycles. Reviewers and SMEs directly access the platform to preview a course, see other reviewer comments and post comments directly to a course page, allowing developers to respond immediately.

Manage

Catapult Rapid LCMS is the only platform with Standardized Variation™ — configurable variants within a single course version. This allows us to tailor course elements to specific locations, departments, etc., eliminating the need to develop separate courses. This industry-unique process delivers powerful benefits, e.g. drastically reducing the translation, localization and maintenance associated with bilingual courses.

Deliver

Courses published from Catapult Rapid LCMS do not contain proprietary file formats and can be updated by commercial software packages.

About Raytheon Professional Services

Raytheon Professional Services is a global leader in learning solutions and services. RPS helps businesses meet their critical objectives by designing, implementing and managing efficient and effective training solutions that improve the performance of their global workforce.

To align your training outcomes and business objectives through superior WBT, consider Catapult Rapid LCMS — delivered exclusively by Raytheon Professional Services.
