

RAYTHEON IN THE COMMUNITY

"Learning new languages gives a lot of opportunities in the future and simplifies getting to know people and making friends, traveling, studying abroad and familiarizing new cultures."

English Learning Class Participant

Raytheon is committed to inspiring students in Poland to develop and sustain an interest in science, technology, engineering and mathematics.

Raytheon is an exclusive partner for the Copernicus Science Center's FabLab, Poland's learning lab where children, adolescents and educators learn by designing and making their own constructs and models. They use digital production equipment such as 3-D printers, plotters, digital cutters and hand tools. Raytheon is also an active partner for the Robotics Workshop.

Additionally, Raytheon recently sponsored an English learning trip to London for 10 teenagers of the Association as well as private after-school tutoring for students during the 2017–2018 school year. Raytheon and the Association of Fallen Families "Remembrance and the Future," an organization that provides support for the families of fallen soldiers, began cooperation in 2016 by organizing psychological and therapeutic workshops for families of soldiers fallen in missions abroad.
