

Biography

Jim is the General Manager Joint Battlespace Systems for Raytheon Australia.

Based in Brisbane, Jim is responsible for the Joint Battlespace Systems product line which includes aerospace in service support projects, C4I projects, simulation and training, future range programs and our air traffic systems role for Defence.

Jim joined Raytheon Australia in 1999 and has held leadership appointments in general management, project management, integrated logistics, and supply chain management. Furthermore, he was the Deputy Director of the Support System IPT for Australia's largest approved major project with the Defence Materiel Organisation, the Air Warfare Destroyer program. He also spent a number of years successfully managing a portfolio of performance-based sustainment programs.

Prior to his employment with Raytheon, Jim had a rewarding career with the Australian Defence Force in the fields of logistics, operations, and project management. His service included time in Special Operations, Support, and Training Commands.

Jim is a graduate of the University of New South Wales, where he attained a Master's Degree in Management, and has further qualifications in project management, integrated logistics, and training. In addition, he is a certified practicing project director with the Australian Institute of Project Management and maintains membership with several professional associations.

In 2013, he authored the paper 'Redefining Smart Sustainment Solutions' and also recently presented at Raytheon's global engineering forum in Boston as a sustainment expert.
