

## Global Cyber Solutions Center Dulles, Virginia

Providing a fully functional cyber security operations center, the Raytheon Global Cyber Solutions Center enables demonstrations of new product and services offerings in an operational setting for domestic and international audiences.

### Key Features and Benefits

- Provides venues for high quality demonstrations of Raytheon's integrated cyber defense solutions
- Host demonstrations across the full spectrum of cyber services and products offered by Raytheon and our vendor partners
- Enables physical viewing of an operational Security Operations Center
- Stand-alone, secure facility for cyber testing and assessments
- Multi-compartment separation for different customer communities and programs
- Learning / teaching facility for international customers and partners
- Event monitoring and management, threat monitoring, social media monitoring, forensics, and malware analysis
- Intensive training/mentoring program
- World-leading defensive cyber operations capabilities integrated with advanced threat detection

The Raytheon Global Cyber Solutions Center promotes active customer involvement, with a focus on their unique operational requirements and concepts of operations. We provide “reach back” into Raytheon’s vast pool of engineering talent in the areas of predictive data analytics, proactive/dynamic computer defense, vulnerability research, emulation, reverse engineering, computer network operations tools and cyber security solutions. Raytheon takes a solutions-oriented approach to addressing problems such as advanced persistent threats. Our full spectrum, end-to-end capabilities leverage decades of cyber and intelligence experience—and support organizations, government agencies and nations across the globe.

Raytheon’s end-to-end defensive cyber solutions constantly monitor and protect networks against breach, fraud, theft and sabotage.

Raytheon has the only virtual full-spectrum Cyber Operations Training capability for government and commercial organizations accessible from anywhere in the world. Armed with forensic analysis, indicator extraction tools and processes, Raytheon’s internationally recognized technical staff provides turnkey training and assistance for unsurpassed performance in existing cybersecurity operations.

As a large-scale systems integrator, we take a solutions-oriented approach to addressing advanced persistent threats. We continue to invest in research and development — and maintain partnerships that span the globe. It’s all part of helping organizations, government

agencies and nations effectively minimize cyber risk and safeguard information and infrastructure.

Trust Raytheon to help you secure your space and confidently achieve mission success in the cyber domain.
