

## Innovative Solutions for Outsourced Security Operations

Our longstanding partnership with RSA brings together Raytheon's highly skilled security practitioners with Raytheon next-generation technology capabilities to provide customers with the ability to accelerate the detection, investigation, remediation and management of security incidents and advanced threats

### Did You Know?

- Raytheon is one of the original four RSA Managed Security Partners (MSSPs)
- Raytheon is RSA's only Authorized Services Network (ASN) Level 3 partner in the United States
- Raytheon developed and delivers RSA's NetWitness training curricula
- Raytheon is RSA's preferred partner to implement NetWitness to their customers

As an RSA-approved Managed Security Services Provider, Raytheon provides commercial and government customers with a best-of-breed, fully-managed solution that accelerates the detection, investigation, remediation and management of security incidents and vulnerabilities.

This managed services partnership brings together Raytheon's Virtual Security Operations Center (V-SOC) service with RSA's next generation technology capabilities. This powerful combination is designed to provide customers with a security solution that goes above and beyond the conventional practice of compliance-based security and signature-based monitoring offered by other managed security services providers.

### RSA NetWitness Suite

RSA NetWitness Suite is a single threat detection and response platform, leveraging real-time analytics through a combination of rules, threat intelligence and data science for advanced behavior analytics. These analytics extend across network packets, logs, netflow, and endpoint data in a single platform to detect threats and anomalies. RSA NetWitness Suite collects packets and log data and not only creates metadata from both sources in a unified taxonomy, but allows the analyst to reconstruct the packet traffic for superior forensic visibility and analysis. Most other solutions used for advanced threat detection are incomplete in that they can't perform packet reconstruction or create usable metadata for analysis. RSA NetWitness Suite creates usable, normalized metadata from both logs and packets. This functionality

enables analysts to investigate and respond faster to suspicious activity on customer networks.

### What Can the Raytheon V-SOC Do For You?

The Raytheon V-SOC offers much more value than the standard MSSP offerings on the market today. Through additional innovations in all phases of customer engagement and service delivery, our customers receive return on their current security technology investments (such as RSA NetWitness Suite), take back control of their security events/logs, and reap the benefits of a mature internal security operations.

Raytheon's V-SOC service takes a proactive, intelligence-driven and customized approach to defend customers against the most sophisticated threats.

Raytheon's approach is derived from the sources and methods analysts use to manually hunt and investigate suspicious threat activity. Through a combination of automation, process refinement, alert monitoring and streamlining, our security analysts will effectively analyze customer data to hunt for events of interest.

The Raytheon V-SOC service also offers full management of customer security technology, eliminating the need to focus on hiring internal human talent to support their technology investments. In addition to the device management, the V-SOC will enhance the supported customer toolset by adding custom content that will be leveraged for advanced threat hunting.

### Respond in Minutes, Not Months

#### Broadest Sources of Visibility

- Packets
- Logs
- Endpoint
- Threat Intelligence
- Netflow
- Cloud
- Business Context

#### Complete Control Over Response

- Orchestration across security infrastructure
- Role-based prioritized incident response work flows
- Investigations via full reconstruction

### Our Customer Commitment

Raytheon and RSA are committed to the long-term maturity of our customers' information security programs. Together, we deliver on this promise by:

- Acting as trusted advisors regarding security program buildouts/transitions and architecture/solution development
- Collaborating with our customers to learn their environments in order to effectively act as an extension of their existing security teams
- Alleviating data security concerns by keep all customer data within their network
- Assigning dedicated staff to handle reporting customer event and incident data on a frequent basis
